APPENDIX	527
INDEX	534
IN APPRECIATION	549

PART I

CHAPTER I

BASIS OF MOTION PICTURE SOUND	1
The recording system a robot—Naturalness of illusion—Radio vs. pictures—An entertainment factory—A brain for the microphone—The technical system—Reproduction.	

CHAPTER II

THE NATURE OF SOUND	11
Introduction—Origin of sound—Sound waves—Velocity of sound—Reflection of sound—Refraction of sound—Diffraction—Interference—Architectural acoustics—Perception of sound.	

CHAPTER III

TYPES OF FILM RECORDING	23
Recording media—Types of film records—Methods of recording—Slit width—New recording methods—Photographic requirements of variable area and variable density systems.	

CHAPTER IV

NOISE REDUCTION	44
Method of applying noise reduction to variable area recordings—Method of applying noise reduction to variable density recordings—Definition of terms—Distribution of noise in the recording band—"Carrier reduction" method of noise reduction—"Split-channel" method of noise reduction—"Automatic attenuation" method of noise reduction—Noise reduction circuits—Timing circuits of noise reduction equipment.	

CHAPTER V

RE-RECORDING AND PREPARATION FOR RELEASE	67
The general problem—Early solutions—Influence of noise reduction—Modern solutions—Modern distortion requirements—Re-recording is a creative process—Re-recording technique—Re-recording for duplicate records—Re-recording to combine sound effects—Preparation of tracks—Combining the tracks—Re-recording to adjust levels and quality—Summary.	

CONTENTS

	PAGE
CHAPTER VI	
MICROPHONES	79
Types — Carbon microphone — Condenser microphone — Dynamic or moving coil microphone — Ribbon microphone — Uni-directional microphone — Crystal microphone — Directional effects of microphones.	
CHAPTER VII	
HEADPHONES AND LOUD-SPEAKERS	93
Headphones — Loud-speakers — Introduction — Sound reproducing systems for motion picture theatres — Specifications — Power and frequency requirements — High-frequency horn — Low-frequency horn — Horn assembly — Directivity — Harmonic considerations — Phasing — Dividing network — Measurements — Design data.	
CHAPTER VIII	
FILM DRIVE	116
The synchronous system — The interlock system — Theatre motor drives — Uniformity of film motion.	
CHAPTER IX	
FILM PROCESSING	122
Fundamental measurements — Density measuring devices — Density — Development — Sensitometers — "H and D" curves — Gamma — Fog — Photographic requirements of variable area and variable density records.	
CHAPTER X	
REPRODUCING SYSTEMS	138
Light source and optical system — Slit width — Film velocity — Photo-electric cells — Push-pull sound heads with associated circuits — Flutter — Output power requirements for theatres — Volume range — Standard nomenclature for release print sound tracks and standard fader setting instruction leader.	
CHAPTER XI	
SOUND CIRCUITS	161
The reason for choosing particular impedance circuits — Conditions for maximum transfer of power from one circuit to another — A study of power delivered by a constant voltage generator to a load circuit — Shielding — Longitudinal currents — Method of acoustically adding reverberation to sound track — Pre-recording.	
CHAPTER XII	
MEASUREMENTS IN SOUND CIRCUITS	176
Method of measuring harmonics — Methods of measuring load carrying capacity of amplifiers — Methods of measuring impedance — Methods of	

CONTENTS

	PAGE
measuring dividing networks—Microphone measurements—Intermodulation—Table I, Attenuator design tables.	
CHAPTER XIII	
PHASE DISTORTION	188
CHAPTER XIV	
TRANSFORMERS FOR SOUND CIRCUITS	201
CHAPTER XV	
GENERAL NETWORK THEORY	211
Nature of networks—Two-terminal reactive networks—Equivalent two-terminal networks—Inverse two-terminal networks—Insertion losses.	
CHAPTER XVI	
ATTENUATION EQUALIZERS	228
Nature of equalizers — General equalizer types — Summary of equalizer types—Inverse arms purely reactive—Inverse arms containing both resistive and reactive elements—Equalizer design charts.	
CHAPTER XVII	
EQUALIZER DESIGN	273
CHAPTER XVIII	
WAVE FILTER THEORY	289
Wave filters—Image impedances—Four-terminal networks—Attenuation losses—Transmission and attenuation ranges—Insertion losses.	
CHAPTER XIX	
LOW-PASS AND HIGH-PASS FILTERS	307
Low-pass filter sections—Transmission and attenuation bands—Electrical constants—Image impedances—Attenuation characteristics—Summary of low-pass filter data—Common basic- and derived-type sections—Transmission and attenuation ranges — Electrical constants — Image impedances—Attenuation characteristics—Summary of high-pass filter data—Some design considerations — Series and parallel operation of low-pass and high-pass filters.	
CHAPTER XX	
DIVIDING NETWORKS FOR LOUD-SPEAKER SYSTEMS	327
Series-parallel filter-type dividing networks—Attenuation and phase characteristics — Impedance characteristics — Constant resistance dividing networks—Constructional features.	

CONTENTS

CHAPTER XXI		PAGE
VACUUM TUBES		342
Two-element vacuum tube—Triode amplifier tube—Voltage amplification factor — Maximum output power — Screen-grid tubes — Miscellaneous tubes.		
CHAPTER XXII		
AMPLIFIER CIRCUITS		357
Equivalent circuit of an amplifier—Thevenin's theorem—Direct-resistance coupling—Resistance-condenser coupling—Impedance-condenser coupling —Transformer coupling—Voltage and power amplifiers—Regeneration—Negative feedback amplifiers—Feedback theory—Stability control—Effect of negative feedback on the performance of an amplifier—Feedback amplifiers—Push-pull amplifiers.		
CHAPTER XXIII		
RECTIFIERS		387
Application of rectifiers—Types of rectifiers—Three-electrode rectifiers.		
CHAPTER XXIV		
VOLUME INDICATORS		395
Types of volume indicators—Scale length of volume indicators.		
PART II		
CHAPTER XXV		
ELEMENTARY CONSIDERATIONS		405
Constitution of matter—Atomic weights—Sizes of atoms and electrons—Table II, The natural sequence of the elements.		
CHAPTER XXVI		
STATIC ELECTRICITY		410
Conductors and insulators—Some electrical units—Displacement currents —Capacity of a condenser—Table III, Resistivity and temperature coefficient—Table IV, Specific inductive capacities.		
CHAPTER XXVII		
DIRECT CURRENTS		416
Electrical pressure—Ohm's law—Resistances in series and in parallel—Series-parallel arrangement of resistances—Potential drop—Kirchoff's laws.		
CHAPTER XXVIII		
ELECTRICAL POWER AND ENERGY		426
Unit of power, the watt—Kilowatt and horse power.		

CONTENTS

	PAGE
CHAPTER XXIX	
MAGNETISM	428
Magnets—Magnetic lines of force—Ring magnets—Generator field poles— Permeability—Magnetic shielding—The compass—Table V, Permeability of iron and steel.	
CHAPTER XXX	
ELECTRO-MAGNETISM AND THE MAGNETIC CIRCUIT	434
Magnetic flux about a conductor—Magnetic units—Magnetic pressure— Magnetic resistance (reluctance)—Unit magnetic pole—Magnetic properties of iron—B-H curves—Hysteresis loops—Electro-magnetism—Field of force about a coil—Flux density within a solenoid.	
CHAPTER XXXI	
ELECTRO-MAGNETIC INDUCTION	444
Acceleration and inertia—Value of induced voltage—Self-inductance—The unit of inductance (Henry)—Calculation of mutual inductance—Unity coefficient of coupling.	
CHAPTER XXXII	
THE DECIBEL	451
The decibel—Table VI, Relation between transmission units, and current, voltage and power amplification, and attenuation units.	
CHAPTER XXXIII	
RESISTANCE ATTENUATION NETWORKS	459
"T" type networks—"U" type networks.	
CHAPTER XXXIV	
GENERATORS AND MOTORS	466
Induced electromotive force—E. M. F. induced in a revolving loop—Direct- current generator—Method of connecting field windings—The separately- excited generator—Self-excited generators—Motors—Motor field wind- ings—Motor speed control—Series-wound motor—Shunt-wound motor —Compound-wound motor—Caution in the use of series and shunt motors—Some points of comparison between a motor and a generator.	
CHAPTER XXXV	
ALTERNATING CURRENTS	477
Frequency—Generation of alternating current—Value of alternating cur- rents—Ohm's law for alternating currents—Inductive reactance—Capaci- tive reactance—Inductance and resistance in series—Capacity and resistance in series—Inductance, capacity, and resistance in series—General law for alternating-current circuits.	

CONTENTS

	CHAPTER XXXVI	PAGE
VECTOR NOTATION		486
Addition of vectors—Subtraction of vectors—Multiplication of vectors— Division of vectors—Conversion.		
	CHAPTER XXXVII	
RESONANT CIRCUITS		494
Resonant circuits—The effect of capacitance and induction in resonant cir- cuits—Anti-resonant circuits.		
	CHAPTER XXXVIII	
VACUUM TUBES		502
Two-element vacuum tube—Amount of current flow in a vacuum tube—Velocity of electrons in a vacuum tube—Amount of plate current — Space charge — Three-element vacuum tube — Voltage amplification factor—Plate-filament resistance—Mutual conductance.		
	CHAPTER XXXIX	
TRIODE AMPLIFIERS		510
Three-element tube as an amplifier—Maximum voltage amplification ob- tainable—Voltage amplifiers—Resistance coupled amplifiers—Impedance coupled amplifiers—Comparison of resistance and impedance coupled ampli- fiers—Transformer coupled amplifiers—Power output of amplifiers— Reference power level.
