ACKNOWLEDGMENTS	9
PREFACE	11
INTRODUCTION	13
1 THE MEDIUM	15
The Cinema's Family Tree	15
The Range of Film-Making	20
Science and Education	21
Conception of a Film	22
Visualisation	23
Components and Style	24
Scripting and Editing: Cornerstones of Film Language	25
The Image	27
Human Eye and the Camera Eye	27
Visual Truth and Deception	31
Function of the Single Scene	36
Scene Length	37
Lenses as Creative Tools	37
The Field of View	39
The Close-up	41
Sharpness and Softness	41
The Unshackled Camera	43
Light and Lighting	44
Exteriors	45
Interiors	46
Colour	47
Sound	49
Speech	50
Music	51
Sound Effects	53

2	THE SUBJECT	55
	Our Visible and Invisible Worlds	55
	Explaining Science	59
	Filmed Lecture	59
	The Invisible made Visible	61
	Complex Themes	66
	The Interpretive Film	67
	Making the Message Clear	68
	Aiming at an Audience	70
3	SPECIAL TECHNIQUES	72
	Photographic Methods	72
	Effects in Science Films	72
	Camera Optics	73
	Cinemacrography, cinemicrography	73
	Manipulating the Image	75
	Pepper's Ghost	77
	Masks and Mattes	79
	Infrared Cinematography	81
	Ultra-Violet Cinematography	84
	Filter Effects	86
	Schlieren Process	87
	Cinematographic Methods: Time Dimension	89
	Special Cameras	91
	Under-running	92
	Single-frame and Time-lapse Methods	92
	Over-running	93
	Intermittent Slow-motion Cameras	96
	High-speed Cameras	97
	Freezing Action	97
	Reversing Action	98
	Optical Printing	98
	Preparation for Optical Printing	99
	Models and Scenic Effects	100
	Models	102
	Engineering, Architectural and Scientific Models	102
	Do-it-yourself and Commissioned Models	105
	Unit-produced Models	107
	Professionally Made Models	109
	Atmospheric Effects	111
	Graphics and Symbols	113
	Symbols as a Code	114

Animation	116
Graphics	117
Commissioning Animation	118
Cost of Animation	118
Do-it-yourself Methods	119
Titles	121
Jump Animation	123
Simulated Animation	129
Analogies	130
Unfilmable Analogies	136
 4 FILMS IN THE MAKING	 139
Film Work is Team Work	139
The Work of One Team	141
Three Science-Education Films	142
Science in the Orchestra	142
PART 1: Hearing the Music	145
“V for Vibration” (Production of Sound)	145
No Air—No Sound (Transmission of Sound)	146
Lightning and Thunder (Speed of Sound)	148
Lend me your Ear (Hearing Sound)	151
PART 2: Exploring the Instruments	152
Chimney into Flute (Vibrating Air Columns)	152
Ta-ti, Ta-ti (Pitch)	156
Seven Times Ta-ti (Musical Compass)	157
PART 3: Looking at Sound	160
Harmonics	160
Oboe into Flute (An Experiment)	162
Editing Schedule: High Notes and Low Notes	163
Transference of Heat	164
Convection	165
Conduction	177
Radiation	182
Electro-Magnetic Waves	186
Working with Scientific Apparatus	196
Problems with Diffraction and Interference Photography	198
Two Films on the History of Modern Science	203
Historical Personalities	204
Historic Equipment	205
Mirror in the Sky	206
Introduction: a Signal Across the Ocean	206
Discovery of Radio-Waves by Heinrich Hertz	209
Marconi’s Experiments	212

Ionisation (an Animated Diagram)	213
Discovery of the Ionosphere by Appleton	218
Further Research	222
Radio-astronomy	223
Conquest of the Atom	224
Synopsis	225
The Shrinking Atom	225
J. J. Thomson finds the Electron	226
Rutherford's Shooting Range	228
Rutherford Splits the Nucleus	233
Cockcroft-Walton Atom Smasher	237
Chadwick Discovers the Neutron	240
The Neutron in Action	242
Summary	247
 5 FILM MAKING PROCEDURE	 249
Sponsors	249
Finance	250
Technical and Educational Advisers	251
Production Routine	252
Pre-production	253
Chart for Production Routine	254
Filming and Editing	259
Recording, Track-laying, Dubbing	262
Completion	266
 6 AUDIO-VISUAL AIDS	 269
The AVA Scene	269
8mm Film in Education	270
Loop Films (Cassettes)	272
 APPENDIX	 275
Guide Lines for the Evaluation of Science Films	275
Film Libraries and Catalogues	279
Scientific Film Associations and Societies	282
Educational and Popular Science Films	283
Film Running Time to Footage	285
Bibliography	286
 GLOSSARY OF FILM TERMS	 289
 INDEX	 300
