<i>Chapter</i>		<i>Page</i>
	INTRODUCTION	12
1	GENERAL PRINCIPLES	15
	Fundamentals—Requirements of Motion Pictures: A Brief Historical Survey—Standard Dimensions for Film Perforating—Early Cinematograph Cameras—Manufacture of Motion Picture Film—Sequence of Operations in Film Production—Industrial Standards	
2	THE CINEMATOGRAPH CAMERA	42
	General Considerations—Basic Requirements—Intermittent Movement—Early Mechanisms—Claw Mechanisms—Pilot Pin Registration—Bell & Howell Shuttle Mechanism—Mitchell & Newall Mechanisms—Marconi Fast-Pull-Down Mechanism—Camera Shutter—Shutter 'Cut off' Efficiency—Variable Aperture Shutters—Mirror Shutters—Camera Apertures and Image Dimensions—Typical Camera Layout—Non-standard Cinematography—High-speed Cameras—Time-lapse Cameras	
3	FILM PROCESSING EQUIPMENT	77
	Modern Portable Units—Continuous Processing Equipment—Film Path—Conventional Laboratory Equipment—Feed Rolls and Splicing Table—Film Feed Elevators—Processing Tanks—Developer Circulating Pump—Solution Replenishing System—Film Squeegees and Air Knives—Drying Operation—Appearance of Drying Film—Take-up Elevator—Methods of Film Transport—Safety Devices—Unusual Processing Techniques	
4	QUALITY CONTROL IN PROCESSING MOTION PICTURE FILM	109
	Processing Faults—Technical Terms—Useful Tables—Factors Affecting Image Quality—Photographic Speed and	

Grain Size—Initial Camera Exposure—Activity of Developer—Developer Temperature—Developing Time—Developer Exhaustion—Fixing Solution—Washing and Image Permanence—Film Condition Immediately after Processing—After Treatment of Processed Film—Silver Recovery—Reversal Emulsions

- 5 SENSITOMETRY 140
- Density-transmission Relationship—Opacity—Log-Exposure—Sensitometer—Densitometer—Illustrating Emulsion Characteristics—Metre Candle Seconds—Characteristic Curves—Film Speed—General Characteristics—Reproducibility of Tests—Required Negative and Positive Gamma Values—Gamma Values for Photographic Sound Recording—Processing Variable-Area Recordings—Sensitometry and Film in Television—Staircase Waveforms
- 6 PRINTING MOTION PICTURE FILM
- General Principles—Intermittent Contact Printers—Intermittent Step-Optical Printers—Rotary Contact Printers—Sprocket Design—Liquid Gate Printing—Newsreel Cascade Printers—Bell & Howell Fully Automatic Printers—Grading Printer Exposure—Aids to Selecting Optimum Exposure—Light-Changing Devices—Bell & Howell Model D Light-Change—Punched-Tape Light-Changers—Special Effects and Travelling Mattes—A and B Roll Printing—Automatic Optical Effects Printing 173
- 7 THE MOTION PICTURE PROJECTOR 217
- General—Picture Steadiness—Basic Projector Design—Basic 16 mm. Projector Mechanism—Intermittent Mechanisms—Shutter Types, Positions and Efficiency—Light Sources—Screen Brightness and Flicker—Projector Optics—Projector Lenses and Picture Distortion—Wide-Screen Projection—Projector Apertures and Picture Framing—Sprocket Teeth and Diameters—Film Feed and Take-up—Threading Film to Ensure Synchronism—Screens
- 8 THE ADDITION OF SOUND TO FILMS 254
- Nature of Sound—Audible Spectrum—Human Ear—Recording Systems—Early Disc Recording—Modern Magnetic Recording—Photographic Sound Recording

Chapter

Page

— Light -Valves — General Notes on Light -Valves —
Mirror Galvanometers—Push-Pull Tracks—Ground Noise
Reduction—Sound Recording Films—Variable Area versus
Variable Density—Volume Expansion versus Control Tracks
—Fantasound—Stereophonic Sound

9 PROCESSING SOUND FILM 289

General Considerations—Sensitometry and Variable Den-
sity Sound Recording—Shortcomings of Sensitometry for
Sound Film Processing—Cross Modulation—Intermodula-
tion

10 SOUND REPRODUCTION 311

Film Reproduction—Exciter Lamps—Position and Size of
Scanning Slits—Photo Electric Cells—Light Beam Con-
ductors—Film Drive at Scanning Point—Sound Lead
Ahead of Picture—Speaker and Horn System—Sound
Screen—Theatre Acoustics and Echo—Sound Fading—
Monitor Speaker—Factors Affecting Sound Quality—Buzz-
Track Test Films—16 mm. Projector Standards

11 THE REDUCTION PRINTING PROCESS 338

General—Picture Reduction Printing—Reducing the
Sound Track—Optical Picture Reduction Printers—16 mm.
Twin-Head Optical Reduction Printers—Twin-Head Beam-
Splitting Systems—Printer Adjustments—Exposure Ad-
justments and Negative Density—Negative Grading and
Exposure Selection—Multiple Copies by Direct Contact
Printing—Sound Reduction Printing—Film Dimensions—
Optical Reduction Sound Printers—Constant Film Speed
and Reduction Ratios—Constant Film Speed—Magnetic
Drum Drives—Anamorphote Lens Systems—Design of
Printing Gates—Printer Illumination—Methods of Produc-
ing 16 mm. Sound Tracks—Comparison between Optical
Reduction and Re-recording—Sound Lead Ahead of Picture
