

CONTENTS

<i>Foreword</i>	page ix
<i>Preface</i>	xi
<i>Chapter 1. The Structure of the Retinal Elements</i>	1
The rods and cones. Neural connections. Summary.	
<i>Chapter 2. The Function of the Retinal Elements</i>	21
Impulses in retinal nerve fibres. The function of the rods. The spectral sensitivities of the rods and cones. Summary.	
<i>Chapter 3. The Spectrum in terms of Rod and Cone Sensitivity</i>	51
The construction of a colour diagram. The interpretation of the colour diagram. Colour mixture. Summary.	
<i>Chapter 4. The C.I.E. Colour Chart and a possible Interpretation</i>	69
Principles of colour mixing. Rod-cone diagram and C.I.E. chart compared. Isochromatic areas and step-lengths. Effects of adaptation to coloured lights. Summary.	
<i>Chapter 5. Impulse Frequencies in Retinal Nerve Fibres and the Perception of Colour</i>	92
Light intensity, wave-length and impulse frequency. Relationship between rod response and cone response. Rod-cone diagrams in terms of nerve impulse frequencies. The spectrum at different levels of illumination. Saturation. The addition of white to spectral colours. Summary.	
<i>Chapter 6. The Trichromatic Basis for Colour Perception, and the Perception of Colour at the fovea centralis</i>	130
The trichromatic and duplicity theories in relation to retinal structure. Visual acuity. Colour sensitivity of different parts of the retina. Limitations of the rod-cone hypothesis. The perception of blue and the properties of the fovea. The dark-adapting rod as the third receptor. Inhibition in the retina. The action of drugs. Electrical responses in retinal nerve fibres and the problem of colour vision. Summary.	
<i>Chapter 7. Certain aspects of Colour-blindness</i>	169
Occurrence and general causation. Types of colour-blindness. Possible causes for colour anomalies. Monochromats. Dichromats.	
<i>Addendum</i>	197
<i>General Statement of the Theory</i>	212
<i>References</i>	215
<i>Notes on the Construction of the Colour Chart</i>	218
<i>Author Index</i>	221
<i>Subject Index</i>	223
