

# CONTENTS

<b>CHAPTER 1 THE NATURE OF COLOR PHOTOGRAPHY</b>	<b>1</b>
Photography stops time	7
Photography describes	8
Photography illustrates words	11
Photography is international	13
Photography multiplies events	14
Photography can change magnification	15
Photographers create	16
Photography extends vision	18
Photography is a hobby	20
Summary	21
<b>2 HOW WE SEE THINGS</b>	<b>24</b>
The eye and the brain	25
Perspective and the moving eye	26
Depth	27
Motion parallax	31
Binocular vision	31
Monocular depth clues	34

Unfamiliar scenes	42
Size of objects	43
The work of Lüneberg	46
Shape	47
Things remembered	50
Idealization	51
Desire for idealized perception	53
Form adaptation	53
Color and light	55
The colors of objects	56
Perception of object properties	57
Perception of reflectance	61
Perception of illumination	63
Perception of source of light	65
Perception of white	66
Perception of gray and black	67
Combinations of perceptions	69
<b>3 HOW THE CAMERA SEES THINGS</b>	<b>71</b>
Light reflected by objects	72
Image formation	73
Image on a surface	74
Depth of field	75
Photographic images	77
The complete lens image	78
Tipped image planes	79
Lens aberrations	88
Distortion in the image	89
Visual perspective in a plane	89
Visual mental projection	91
Systems of parallel lines	93
Tilted projection planes	95
Correction and depth of field	97
Lens apertures	97
Illumination on tilted planes	100
Constant relations in the image	101
Motion in the subject	104
Shutters and moving objects	106

---

Color relations in the image	107
Lens effects on color	109
The perfect lens image	110
The "perfect" photographic result	110
<b>4 COLOR AND FORM IN PHOTOGRAPHS</b>	<b>112</b>
The photograph as object	112
Extreme types of photographs	113
Specific types of photographs	114
The appearance of the photograph	116
Relative appearances of pictures	120
Photographs as localized in space	121
Photographs as representations	122
Position of the observer	123
Perceived depth	128
Perspective	131
The "monocular" depth clues	137
Surface of the photograph	138
Brightness contrast	138
<b>5 THE PERCEPTION OF LIGHT AND COLOR IN PHOTOGRAPHS</b>	<b>146</b>
Illumination perception	146
Geometry of the illumination	147
Matte surfaces	153
Transparency	156
Surface reflections	157
Illumination level	158
Brightness range	161
Brightness higher than white	162
Hue shift with intensity	167
Uniformity of illumination	168
Uniform illumination	170
Color reproduction	171
Color of illumination	171
Adaptation to the photograph	172
Reproduction of colored illumination	174
Energy distribution of the light source	175

Summary of color adaptation effects	176
Critical nature of print viewing	177
The consistency principle	178
Color balance of pictures	180
Contributions of the photographer	181
<b>6 HOW COLOR PHOTOGRAPHY WORKS</b>	<b>183</b>
Basic principles	183
Components of the picture	188
Dye-forming process	190
Reversal processes	192
Duplicating processes	195
Negative-positive processes	199
Separation negative printing processes	201
Reflection print process	202
Exposure and exposure calculation	204
Hand colored photographs	207
<b>7 SUBJECT AND INTENTION IN PHOTOGRAPHY</b>	<b>211</b>
The subject of a picture	214
Subject matter	216
The "idea" in photography	230
Intentions in photography	235
Records	236
Descriptions	240
Snapshots and home movies	244
Reproductions	246
Scientific photographs	247
Expressive pictures	249
Creative pictures	251
<b>8 WHAT THIS PERMITS US TO DO</b>	<b>253</b>
Subject and objects	253
Position of the camera	255
Arrangement of the objects	262
Role of logical probability	264
Assumption of constant size	270

---

Convergence	272
Experience	280
Lighting	286
Daylight or "natural" light	287
Artificial lighting	291
Establishment of the illumination	291
Description of surfaces	299
Establishment of shapes	303
Depth and lighting	304
Lighting and sharpness	307
Lenses	308
Depth of field	308
Focal length and perspective	315
Method of exposure	317
"Kind of photography"	318
Film and lens angle	321
Choice of sensitive material	326
Keeping properties	329
Presentation of transparencies	330
Colored filters	331
Effect of colored filters	333
<b>9 CONTROL IN PRINTING</b>	<b>335</b>
Picture contrast	335
Projection printing	339
Paper surface	341
Texture screens	344
White and black	346
Emphasis of fine detail	348
Derivations from color photographs	350
Zero brightness contrast	352
Line contour images	353
Highlights and shadows	358
Introduction of texture	359
Fine detail images	360
Interconversion of elements	361
Hue to brightness	361
Brightness into hue	362
Handwork in print processes	364
Presentation of the print	365

<b>10 PHOTOGRAPHY AS A CREATIVE MEDIUM</b>	<b>366</b>
Amateur photography	366
Narrative pictures	367
Imitative photography	369
Reality vs. nonreality	372
Advertising and display	376
Make-up	377
Individual style	378
<b>BIBLIOGRAPHY</b>	<b>381</b>
