

# CONTENTS

	PAGE
INTRODUCTION . . . . .	7
I. THE PROBLEM : Negative-positive and reversal film curves—Compensation during processing—The kind of result wanted—Restating the problem . . . . .	11
II. HIGH-LIGHT READINGS : What the meter does—Readings on high-lights—Converting to camera exposures . . . . .	25
III. PRACTICAL METHODS : The paradoxes of high-light readings—Artificial high-lights—Extra or less exposure in unusual cases—The trouble of contrast—Instructions to the processing laboratory . . . . .	33
IV. USEFUL HELPS : Converting the meter for direct high-light readings—Finding the right speed number to use—Daylight and artificial light on the same reel—A final word . . . . .	50
V. TABLES : (I) Alteration of lens aperture when using filters ; (II) Alteration of lens aperture with different camera speeds ; (III) Conversion of Din, Scheiner, and H. & D. Numbers ; (IV) Mask aperture sizes . . . . .	65
INDEX . . . . .	70
