

FOREWORD by Sir Robert Watson-Watt, F.R.S. . . . .	vii
PREFACE . . . . .	ix
ACKNOWLEDGMENTS . . . . .	xi
<b>1. SCIENTIFIC CINEMATOGRAPHY AND THE RESEARCH FILM: INTRODUCTION</b>	<b>1</b>
Definition of Research Film and Scientific Cinematography . . . . .	1
The Boundaries of Scientific Cinematography . . . . .	2
Marey's Historical Contribution to Scientific Cinematography . . . . .	3
The Literature of Scientific Cinematography . . . . .	7
The Advantages and Limitations of Scientific Cinematography . . . . .	9
The Research Film . . . . .	12
The Cine Camera . . . . .	13
The Chronometer . . . . .	17
Planning the Research Film . . . . .	20
Analysis of the Research Film . . . . .	23
Using the Research Film . . . . .	27
Preservation and Storage of the Research Film . . . . .	28
Stereoscopic Cinematography in Research . . . . .	31
<b>PART 1. THE BIOLOGICAL SCIENCES</b>	
<b>2. CINEMICROGRAPHY . . . . .</b>	<b>35</b>
The Argument . . . . .	35
Introduction . . . . .	35
Historical, 35. Advantages and limitations of cinemicrography, 36.	
Choice of Film Format . . . . .	37
Support for Microscope and Camera . . . . .	38
9.5-and 16-mm installations, 39. 35-mm installations, 41.	
Cine Cameras . . . . .	52
16-mm cameras, 53. 35-mm cameras, 54. High-speed cinemicrography, 56.	
Microscopes for Cinemicrography . . . . .	57
General considerations, 57. Stereoscopic cinemicrography, 58. Cinemicrography with the electron microscope, 60. Other special microscope techniques, 60. Microscope accessories for cinemicrography, 61.	
The Observation Eyepiece or Beam-Splitter . . . . .	62
General types of beam-splitters, 63. Other types of beam-splitters, 64. Photoelectric exposure measurements with the beam-splitter, 66. Recording titles during filming, 67.	
Illumination for Cinemicrography . . . . .	68
Time-Lapse Mechanisms . . . . .	71
Continuous drives, 72. Intermittent drives, particularly clockwork, 73. Mechanical methods, 73. Electrical methods, 75.	
The Technique of the Time-Lapse Experiment . . . . .	78
Film and the test strip, 78. The data sheet, 79.	
Scientific Evaluation of the Time-Lapse Film . . . . .	80
Editing and projection, 80. Analysis by frame and by locus, 81. Further methods of frame-analysis, 82.	

3. BIOLOGY . . . . .	85
The Argument . . . . .	85
Introduction . . . . .	85
Special Techniques of Biological Cinematography . . . . .	88
Ordinates of time and space, 88. Heat absorption from illumination, 90.	
Immobilization of animals, 90. Infrared illumination, 91. Cinematog-	
raphy of serial sections, 91. Television in biological research, 94.	
Microbiology . . . . .	95
Historical, 95. Bacterial growth and reproduction, 96. Bacterial locomotion,	
97. Virus and bacteriophage, 98.	
Cytology . . . . .	98
Morphology of the cell, 99. Cell division, 102. Hemocytology, 107. Cytopathology,	
cancer, 109. Physiology of unicellular animals, 110.	
Reproduction . . . . .	111
Embryology . . . . .	113
Invertebrates, 113. Vertebrates, 115.	
Locomotion . . . . .	118
Introduction, 118. Locomotion on land, 118. Locomotion in water, 121.	
Flight of birds, 122. Flight of insects, 124.	
Muscular Action . . . . .	127
Feeding and Digestive Mechanisms . . . . .	128
Feeding, 128. Digestion, 128. Excretion, 130.	
Respiration . . . . .	131
Circulation and the Heart . . . . .	132
Techniques, 133. Direct cinematography at normal frequency, 134. Direct	
high-speed cinematography, 136. X-ray cinematography at normal frequency,	
138. High-speed X-ray cinematography, 139.	
Nervous System and Sense Organs . . . . .	141
Nerves, 141. Sense Organs, 143.	
Botany . . . . .	143
Plant growth and tropisms, 144. Plant physiology, 145. Mycology, 147.	
4. ANIMAL BEHAVIOR . . . . .	149
The Argument . . . . .	149
Scientific Cinematography of Animal Behavior . . . . .	149
Sensory perception, 151. Instinctive behavior, 154. Social behavior, 157.	
Behavior influenced by learning, 158. Experimentally produced abnormal	
behavior in animals, 161.	

## PART 2. THE HUMAN SCIENCES

5. HUMAN RECORD FILMS . . . . .	167
The Argument . . . . .	167
Theoretical Considerations . . . . .	167
The objectiveness of cinematographic records, 167. Limitations of cinematography,	
169. The conventions of scripting and editing, 171. The conventions of camera position	
and illumination, 176.	
Practical Considerations . . . . .	179
Choice of cinematographer, 179. Basic film techniques, 180. Advanced techniques,	
181. Editing and "cinematographic thesis," 185.	

6. ANTHROPOLOGY . . . . .	188
The Argument . . . . .	188
Scientific Cinematography in Anthropology . . . . .	188
Value of cinematography in anthropological research, 188. The relation of cinematography to social and physical anthropology, 190. The relation of cinematography to various anthropological field techniques, 192. The literature of anthropological cinematography, 193. Anthropological film archives, 194.	
Techniques of Anthropological Cinematography in the Field . . . . .	196
Preliminary planning of cinematography for an expedition, 196. The recording of material and nonmaterial culture in the field, 197. Native contact during filming, 198. Sound recording in the field, 200.	
Anthropological Films . . . . .	204
Europe, 204. Africa, 207. Asia, 213. Australia and New Guinea, 216. Oceania, 220. America, 224.	
Future Application of Cinematography in Anthropology . . . . .	230
Archaeology . . . . .	231
7. PSYCHOLOGY AND PSYCHIATRY . . . . .	233
The Argument . . . . .	233
The Value of Cinematography in Psychological Research . . . . .	233
Reviews and Sources of Psychological Films . . . . .	236
Child Psychology . . . . .	237
Observational research films, 238. Experimental research films, 240. Quantitative research films, 241.	
Educational Psychology . . . . .	243
General Psychology . . . . .	245
Eye and ear, 245. Reaction times and startle reactions, 248. Films as the experimental stimulus, 249. Personality study, in particular hypnosis, 250.	
Industrial Psychology—Time and Motion Study . . . . .	252
Introduction, 252. Techniques for cinematographic time and motion studies, 253. Applications of cinematography to time and motion studies, 255.	
Psychiatry . . . . .	258
The value of cinematography in psychiatry, 258. Applications of cinematography to psychopathology, 259. Diagnosis, 262. Therapy, 263.	

## PART 3. THE MEDICAL SCIENCES

8. TECHNIQUES OF MEDICAL CINEMATOGRAPHY . . . . .	269
The Argument . . . . .	269
History . . . . .	269
Cinematography of External Conditions . . . . .	272
Cinematographic techniques, 273. Scripting and editing, 274.	
Cinematography of Surgical Operations . . . . .	275
Research function of surgical cinematography, 275. The theater and the camera stand, 276. Cameras, lenses, and illumination, 280.	
Cavity Cinematography . . . . .	282
Illumination of conical cavities, 282. Illumination of cylindrical cavities, 283.	

Endoscopic Cinematography . . . . .	285
General techniques, 286. Distal and piped illumination, 287. Proximal illumination, 288.	
Special Techniques of Medical Cinematography . . . . .	292
Stereoscopic cinematography, 292. Cinematography by invisible radiation, 292. Television, 293.	
9. TECHNIQUES OF X-RAY CINEMATOGRAPHY . . . . .	295
The Argument . . . . .	295
Introduction . . . . .	295
Advantages of x-ray cinematography, 295. Reviews of x-ray cinematography, 296.	
History of X-Ray Cinematography . . . . .	297
The Advantages and Disadvantages of the Direct and Indirect Method . . . . .	299
Component Equipment for X-Ray Cinematography . . . . .	301
The x-ray tube, 301. The screen and the film, 305. Direct x-ray cinematography: intermittent mechanisms, 306. Indirect x-ray cinematography, 308. Projection, analysis, and printing, 314.	
Stereoscopic X-Ray Cinematography . . . . .	315
Electronic Intensification of X-Ray Image . . . . .	317
10. MEDICINE . . . . .	321
The Argument . . . . .	321
Scientific Cinematography in Medicine . . . . .	321
Medicine in relation to research films in other disciplines, 322. The advantages of cinematography in medical research and diagnosis, 323.	
Medical Film Catalogues and Film Libraries . . . . .	328
Locomotion . . . . .	331
Historical, 331. Physiology of limb movements, 332. Pathology of limb movements, 335. Physiology of sport, 336. Other studies of sport, 338.	
Digestion . . . . .	338
Mastication, deglutition, and the esophagus, 339. Stomach, intestines, and rectum, 340.	
Respiration . . . . .	343
Larynx, 343. Speech, 346. Nasal air currents and ciliary movements, 348. Thorax, 349.	
Genitourinary System . . . . .	351
Bladder, 352. Spermatozoa, 353.	
Circulation . . . . .	353
Historical, 354. General circulation, 354. Heart, 355.	
Sense Organs . . . . .	358
Movements of the eyeball, 359. Pupil, 360. Retina and vitreous humor, 361. Ophthalmology in general, 363. Ear, 364.	
Neurology . . . . .	365
Pathology . . . . .	365
Cancer, 365. Hemocytology, 366. General pathology, 367.	
Aviation Medicine . . . . .	368
EPILOGUE . . . . .	371
AUTHOR AND REFERENCE INDEX . . . . .	375
SUBJECT INDEX . . . . .	467
