

CONTENTS

PART I

GENERAL THEORY

CHAPTER		PAGE
I.	HISTORICAL DEVELOPMENT	
	Art.	
	1. The Beauty and Utility of an Image	3
	2. Niepce	4
	3. Daguerre	5
	4. Talbot	6
	5. Wet Collodion	7
	6. Collodion Emulsions	9
	7. The Development of the Gelatine Dry Plate	10
	8. Gelatine	11
	9. Silver Haloids	12
	10. Dry Plate Making	13
	11. Ammonia Modification	16
	12. Centrifuge	16
	13. Processes in General	17
	14. Summary	18
II.	PROPERTIES OF THE GELATINE DRY PLATE—EXPOSURE AND DEVELOPMENT	
	15. The Problem	19
	16. Hurter and Driffeld	20
	17. Law of Absorption of Light	21
	18. Photometer	23
	19. Fog	25
	20. Ferrous Oxalate	27
	21. Growth of Density	28
	22. Constant Density Ratios	29
	23. Application in Practice	31
	24. Intensification	32
	25. Characteristic Curve	33
	26. Period of Correct Exposure	37

CHAPTER	PAGE
27. Perfect Negative	39
28. Period of Underexposure	40
29. Period of Overexposure	42
30. Period of Reversal	43
31. Dependence of Slope on Development	43
32. Development Factor	45
33. Practical Control of Amount of Development (Contrast)	47
33a. Constant Time at Const. Temperature	47
33b. Time Adjusted to Temperature	48
33c. The Watkins Factorial System	49
34. Contrast	50
35. Thickness of Film	52
36. Like Negatives from Different Exposures (Latitude)	53
37. Organic Dry Plate Developers	55
38. The Choice of a Developer	56
39. Estimation of Exposure	57
40. Shutters	58
41. The Stop	61
42. Dry Plate Speeds	64
43. Preliminary Exposure	67
44. Character of Subject	68
45. Lighting	69
III. PROPERTIES OF THE GELATINE DRY PLATE—COLOR SENSITIVENESS	
46. Colored Object with Ordinary Plate	72
47. Color Sensitiveness Curves	73
48. Dyes	74
49. Absorption Curves	77
50. Absorption and Sensitizing	78
51. Practical Application	80
52. Screening Action	83
53. Color Screens	84
54. Rendering Color Contrast	87
IV. LATENT IMAGE THEORIES	
55. Basic Facts	89
56. Theories	91
57. Physical Modification	91
58. Silver Grain	92
59. Silver Sub-bromide	93
60. Solid Solution	94
61. Conclusion	97

CHAPTER	PAGE
V. NEGATIVE DEFECTS	
62. Classification	99
63. Thin Negatives	99
64. Intensification	101
65. Overexposure	103
66. Overdevelopment	104
67. Fog	104
68. Reduction	107
69. Local Reduction	109
70. Conclusions	109
71. Frilling	110
72. Dust	111
73. Air Bells	112
74. Black Spots	112
75. Finger Marks	113
76. Pressure Marks	113
77. Halation	114
78. "Oyster Shell Marking"	118
79. Stain	118
80. Bubbles	118
81. Drying Troubles	119
VI. POSITIVE PROCESSES	
82. Transparencies	121
83. Lantern Slides	121
84. Blue Prints	124
85. Printing Out Paper (P. O. P.)	125
86. Developing Paper	127
87. Sulphide Toning	132
88. Platinotype	133
89. Carbon Printing	135
90. Photo-engraving	139
VII. LENSES	
91. Pinhole Images	142
92. A Lens	145
93. Images	146
94. Size of Image	149
95. Defects in Images Formed by Lenses— Aberrations	150
96. Spherical Aberration	151
97. Coma	152
98. Chromatic Aberration	153
99. Achromatism	154
100. Curvature of Field	159

CHAPTER		PAGE
	101. Astigmatism	159
	102. Distortion	160
	103. Flare	162
	104. Unequal Illumination	163
	105. Depth of Focus	165
	106. Speed of Lenses	167
	107. Lens Types	168
	108. Telephoto Lens	170
VIII. COLOR PHOTOGRAPHY		
	109. Classification of Methods	173
	110. Lipmann Process	174
	111. Pigment Processes	178
	112. Three Negatives	179
	113. The Additive Method	179
	114. The Subtractive Method	180
	115. Carbon Process	183
	116. Pinatype Process	183
	117. Traube	185
	118. Photo-engraving	186
	119. Mosaic Screen Process	186
	120. Autochrome	187
	121. Mosaic Screen Making	190
	122. Conclusion	193
	123. Bleach-out Process	193
IX. GOOD PICTURES		
	124. Definition	195
	125. Pictures	196
	126. Picture Composition	198
	127. Unity	199
	128. Simplicity	200
	129. Foreground	201
	130. Sky-line	201
	131. Sky	202
	132. Aerial Perspective	203
	133. Color in Subject	204
	134. Lighting	206
	135. Notan	207
	136. Balance	208
	137. Focal Length of Lens	208
	138. Distortion from Short Focal Length	210
	139. Angle of View	210
	140. Focusing	211
	141. Distortion from Inclined Plate	213
	142. Lens Axis	213
